1. INTRODUCTION

Figure 1 shows an example of a figure with multiple subpanels. The default behaviour for `showyourwork` is to assume that all the subpanels within a `figure` environment are generated by the same script. In this case, by labeling the figure with `\label{fig:koch}`, we are telling `showyourwork` that the script `figures/koch.py` generates the two PDF files included in the `figure` environment.

Figure 1. A sample plot with two subpanels, both generated from the same figure script. These show two iterations of a [Koch snowflake](#).
